

2020 Fall Corn Residue Not Tilled

Residue not tilled after corn harvest (% of acres)

Crop acres calculated from
2020 USDA National
Agriculture Statistics Service
(NASS) Cropland Data Layer

Windshield surveys were conducted no sooner than 10 days after the first predicted period of 3 consecutive daytime temperatures above 40° F, and therefore do not represent field conditions outside of that time frame. For more information about transect surveys see:
